# Exercise 1: Hello World – Getting started

**Discussion:** Tuesday, October 20

This exercise sheet is about installing CLion and modifying and executing a simple Hello World programme. If you have any questions or problems, please ask them in the Moodle discussion forum. Try to help each other!

## Problem 1.1: Hello World

1. Visit https://www.jetbrains.com/de-de/clion/ and download the version for your operating system. The software is free for non-commercial use.
2. Follow the installation instructions and install CLion on your system.
3. Get the example code file from the Moodle and use it for a new project in CLion.
4. Run the programme. Change the output from "Hello World" to "Hello <your name>" so that you are greeted.
5. Modify the programme such that it asks for your name and uses it in the output.

*Note:* you may use any other IDE at your own responsibility. For the lab (Praktikum) it will be necessary to show how you obtain an executable programme from the source files on your own device.
